

Estes'
DEK ROK
 SURFACE AGGREGATES

Dek Rok opens new design horizons to architects and Interior designers. If you can imagine it, it can be done. Experienced artisan-installers around the country can easily translate your designs into reality, incorporating logos, bold graphics, intricate borders, delicate color gradations, virtually anything... into the most inspired floors seen since the Renaissance.

But the magic of Dek Rok is not only the aesthetics. Tough quartz stones married to high-performance resins yields a seamless, slip-resistant surface of unmatched durability, impervious to gas, oil and solvents – even tire marks. And though it's real stone, you will be surprised at the 'soft walk' and the enhanced sound-absorbing properties of a Dek Rok floor.

Dek Rok will wear like the stone it is made from. No grout to maintain, nothing to fray, warp, chip or split. Applied to any stable subfloor, Dek Rok should retain an attractive appearance for decades to come.

Of course, Dek Rok's 15 standard colors (opposite page) can be blended on-site, and our extensive experience in colored aggregates enables us to provide custom colors to your exact specs using high-performance pigments (we've been the 'color specialists' for 150 years!)

Dek Rok is competitively priced, and you'll save year after year on maintenance compared to any other flooring.

Dek Rok – it's the 'natural' choice for tough applications where aesthetics really count.
